

Everything under control!

With the new remote control DIRECTOR you lead from the front!

The 2.8" / 7 cm full-colour touchscreen display and the intuitive menu navigation allow an easy handling of many features – for example the volume control of all sources, volume control of the subwoofer, source selection, control and configuration of the HEC BT module or switching between sound setups.

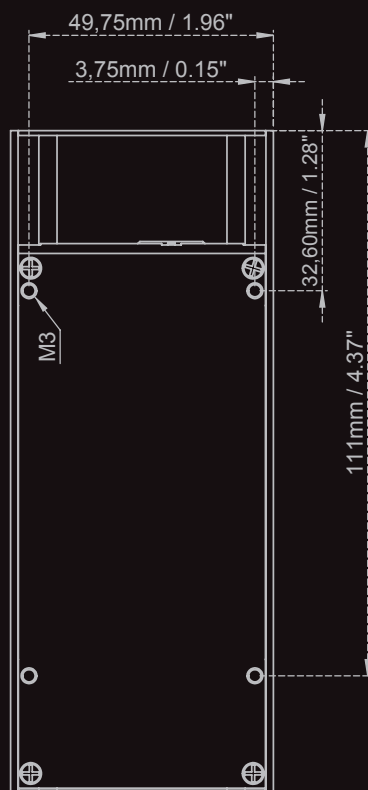

Furthermore it provides sufficient memory for 20 additional sound setups and comes with a USB connector allowing straight access to your DSP device via the DIRECTOR - a big relief if you want to tweak your configuration while your processor/amplifier is hidden somewhere in the trunk.

The high-resolution colour touchscreen is embedded in an exclusive solid aluminium housing. The DIRECTOR is compatible with all DSP products which are supported by DSP PC-Tool Version 3.

Features:

- 2.8" / 7 cm touchscreen display and powerful ARM processor
- Easy handling of the main functions:
 - Volume control of all sources and of the subwoofer
 - Source selection
